

ADIL JASEEM

FULL STACK SOFTWARE ENGINEER | AI PLATFORMS & DISTRIBUTED SYSTEMS

Trivandrum, Kerala, India | +91 6238933779 | adiljaseem.2000@gmail.com
linkedin.com/in/adil-jaseem | github.com/adeljaseem | adil-portfolio.vercel.app

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3+ years of experience building enterprise AI-powered products across React/TypeScript frontends, Python/FastAPI services, event-driven microservices, real-time systems, data platforms, and self-hosted LLM infrastructure. Delivered end-to-end product, backend, deployment, observability, and production-support capabilities for an intelligence and system-dynamics platform.

CORE SKILLS

Languages & Frontend: Python, TypeScript, JavaScript, SQL | React.js, Next.js, Vite, Tailwind CSS, Mapbox GL, D3.js, Recharts
Backend & Architecture: FastAPI, Node.js, gRPC, REST APIs, WebSockets, GraphQL | Microservices, RabbitMQ, Event-Driven Architecture
Data & AI: PostgreSQL, TimescaleDB, Neo4j, Apache AGE, Redis, pgvector, Supabase | llama.cpp, Ollama, Sentence Transformers, Crawl4AI
Platform & Observability: Docker, Docker Compose, Git, Bash, Grafana, Loki, Grafana Alloy, Authentik, Okta, Kong Gateway, PWA

PROFESSIONAL EXPERIENCE

NUMENOR - Full Stack Developer

February 2025 - Present | Trivandrum, Kerala, India

QuantiFore - enterprise intelligence and system-dynamics platform for causal modeling, forecasting, alerts, signal analysis, and interactive what-if simulation.

- Built the complete React and TypeScript frontend for authentication, onboarding, dashboards, monitoring, signal analysis, alerts, causal visualization, interactive simulation, administration, settings, and real-time workflows.
- Designed a distributed natural-language model-discovery and workflow-orchestration system using Python, FastAPI, gRPC, RabbitMQ, PostgreSQL, Redis, exact matching, and pgvector semantic search.
- Built query interpretation and entity-resolution capabilities for intent classification, entity/relationship extraction, canonical naming, alias resolution, contextual disambiguation, embeddings, and Wikidata grounding.
- Developed authenticated WebSocket delivery for progress updates, completion events, alerts, live activity, and background-job states.
- Architected an AI signal-intelligence and scheduling pipeline for trusted-source search, LLM relevance screening, crawling, evidence-backed extraction, geocoding, deduplication, distributed job claiming/recovery, persistence, and alerts.
- Set up self-hosted inference with llama.cpp, Ollama, GGUF models and MLX experiments, including routing, concurrency controls, retries, backoff, and fallbacks.
- Built Docker Compose development, staging, and production workflows for 26+ containers with environment configuration, health checks, startup ordering, shared infrastructure access, and bootstrap automation.
- Implemented Grafana/Loki/Alloy observability, supported Authentik/Okta identity flows, and maintained Git branching, integration, and production-support workflows.

GRAPELIME INNOVATIONS PRIVATE LIMITED - Software Developer

December 2022 - September 2024 | Kochi, Kerala, India

- Developed React interfaces and Node.js/GraphQL backend features across Newsraven, Clinasyst, and Responseloop, including scheduled tasks, database integrations, authentication flows, and Google Maps.
- Integrated OpenAI, Gemini, and Claude for summarization, Q&A, generated content, and semantic search using PostgreSQL, vector databases, and Pinecone.
- Conducted code reviews, removed redundant implementation, supported test deployments, and validated complete frontend and backend feature flows.

PERSONAL PROJECTS

SPENDWISE - Personal Finance & Budgeting PWA - Independent Project | spendws.netlify.app/login

- Built a mobile-first finance application for expense tracking, budgets and allocations, recurring transactions, debt repayments, custom categories, advanced search, and CSV reporting using React, Vite, Tailwind CSS, and Supabase/PostgreSQL.
- Designed authenticated relational financial models with Supabase Auth and PostgreSQL Row-Level Security for expenses, budgets, allocations, recurring items, debts, and payment histories.
- Implemented recurrence rules, debt-payment integration, debounced multi-filter search, amount/date/category sorting, and raw/summary CSV export through reusable React hooks and domain logic.
- Developed Recharts analytics and PWA capabilities including service-worker caching, install/offline support, browser notifications, budget alerts, reminders, themes, haptic feedback, and Netlify deployment.

INTERNSHIP

LUMINAR TECHNOLAB - MEARN Stack Web Development Intern

May 2022 - September 2022 | Kochi, Kerala, India

- Completed hands-on MEARN-stack training and delivered frontend and full-stack application projects.

EDUCATION

Bachelor of Computer Applications - Gems Arts and Science College, Ramapuram | 2019 - 2022 | Malappuram, Kerala

LANGUAGES

English, Malayalam, Hindi, Arabic
